Aprilaire offers the most effective humidification system available

Since 1954, Aprilaire has led the industry, setting the standard for whole-home humidification. The Aprilaire Automatic Humidifier is no exception. It takes the guesswork out of adjusting your controls by responding automatically to outdoor temperatures. You don’t need to worry about too much or too little humidity in your home. You get just the right amount of humidity to keep you healthier and more comfortable.

Aprilaire Automatic Humidifiers are also easy to maintain. They have a built-in reminder light so you know when to call your heating and cooling contractor for a new Water Panel®. Plus, they flush minerals, eliminate standing water and use materials specifically selected to maximize efficiency while meeting your humidification needs.

Medical specialists attest to the health benefits of proper humidity levels in the home:

“It is important to prevent an overly dry environment because it makes people more susceptible to infection.”
- The American Society of Otolaryngology

“...humidity reduces the incidence of respiratory infections and speeds recovery from the common cold.”
- William J. Hitschler, MD
Archives of Otolaryngology

“There is as yet no cure for the common cold. The most important preventative measure would appear to be the proper regulation of the humidity.”
- Joseph Lubart, MD
New York State Journal of Medicine

Automatic controls help you achieve optimum humidity levels

Controlling indoor humidity is critical to protecting your home furnishings and achieving greater wellness. While a manual humidifier delivers a constant amount of humidity, it doesn’t properly adjust for outdoor temperatures. As a result, you tend to get too little moisture or too much.

An Aprilaire Automatic Humidifier continually monitors and responds to both outdoor temperatures and indoor relative humidity levels, delivering optimum levels of humidity throughout your home.

This chart contains actual field test data and demonstrates the close alignment of the orange line, which represents optimum humidity levels over a five-month period, and the dark blue line, which represents the actual amount of humidity delivered by the Aprilaire Automatic Humidifier. The straight line offers a comparison to manual humidifiers, which deliver a constant humidity level, making it nearly impossible to maintain optimum humidity levels in your home. Talk with your heating and cooling contractor today about installing an Aprilaire Automatic Humidifier to experience the best cure for indoor dryness.

Get whole home comfort with the best cure for indoor dryness

Dry air in your home can be the source of many problems including dry noses, scrotal dryness, dry skin and upper respiratory ailments. It causes static shock and damage to home furnishings. Help improve the comfort and health of your family by having an Aprilaire Automatic Humidifier installed. Using patented technology it adjusts to outside temperatures, providing optimum moisture levels throughout your entire home.

For more information about Aprilaire Automatic Humidifiers, contact your heating and cooling contractor today.
When the home heating season arrives, it can be accompanied by a variety of other problems caused specifically by low relative humidity in your home. The roaring dry air attacks moisture from you and everything inside your home. Dry noses. Scratchy throats. Itchy skin. Allergens can increase the likelihood of getting colds, flu and upper respiratory ailments. The American Society of Otolaryngology reports that it is important to prevent dry air. Achieving proper levels requires the assistance of whole-home humidification technology that eliminates the need for constant manual adjustments to deliver the ideal relative humidity.

The Aprilaire Automatic Humidifier features exclusive technology that eliminates the need for constant manual adjustments to deliver the ideal relative humidity:

- **Helps protect against discomfort, illness and damage by eliminating dry, parted, dry throats throughout the home.**
- **Eliminates the need to make constant manual adjustments with exclusive “no touch” operation.**
- **Maintains maximum humidity levels throughout the home by sensing changes in indoor temperature and indoor relative humidity.**
- **Ensures the best performance all the time as an intelligent product that senses when to change the water panel.**
- **Improves comfort, well-being, preservation and energy savings, generating up to 35% more moisture than humidifiers using a manual control.**

Benefit from the best humidifier technology for improved comfort, health and energy savings

Enjoy the benefits of an affordable and intelligent system that is easy to install and offers improved health, comfort and energy savings:

- **Aprilaire Humidifiers respond to outdoor temperature changes more than 400,000 times per day, controlling the humidifier’s special operating optimum indoor humidity levels automatically.**
- **Solid state electronics assure total system reliability and precision.**
- **Aprilaire Humidifiers are designed to humidify against three times more accurate than other humidifiers.**

Different whole-home models for different home needs

Aprilaire offers a full line of humidifiers — each one made specifically to meet the humidification challenges of many different types of homes and heating systems. Choose your heating and cooling contractor to service your Aprilaire Humidifier. Together, they extend your heating system’s life, continuously satisfying your humidity needs.

- **Model 700** — the power humidifier has been built in a fan that can humidify air directly from the furnace and draw it across a water panel where evaporation takes place. Provides humidified air throughout the entire home.
- **Model 900** — equipped with a bypass damper, this humidifier can humidify air from the furnace to move air through a water panel, where the humidification process occurs. Humidified air is then distributed to the entire home.
- **Model 920** — uses evaporative technology and is designed specifically for a door. Its advanced design uses 100% of the water that goes into the unit. This unit is ideal for homes with attic systems and homeowners who are concerned about water issues.

Intelligent Solutions for Indoor Environments

Aprilaire offers a series of products that work together to improve indoor air quality throughout your whole home and heating systems. Consult with your heating and cooling contractor to see which humidifier is best for you.

- **Model 750** — a self-contained unit designed for smaller homes. It uses the introduction of humidity in the form of water vapor to prevent minerals from entering the air stream in the home. The Aprilaire Automatic Humidifier is easy to install in the living area or on the furnace ductwork.
- **Model 8570** — the only solution is the Aprilaire Model 8570. When installed with the Aprilaire Automatic Humidifier, this humidifier is the perfect solution for the home. Its design is ideal for homes with attic systems and homeowners who are concerned about indoor humidity, and maintain the temperature in your home to within one degree. Total comfort control through extended blower run time — this humidifier only operates during those times of the blower of your heating system run. Today’s high efficiency furnaces deliver more BTUs of heat and have shorter “on” cycles, which can lead to your home being under humidified. The only solution is the Aprilaire Model 8570. Its advanced design uses 100% of the water that goes into the unit. This unit is ideal for homes with attic systems and homeowners who are concerned about indoor water issues.

Your local heating and cooling contractor can help you choose the humidifier that’s best for you.

Trust your family and your home with whole-home humidification

Properly humidified air can help prevent problems aggravated by dry air. Achieving proper levels requires the assistance of a humidifier. Normal household activities, such as cooking, washing clothes and showering, simply cannot provide enough moisture for the right levels of moisture in your home to keep your whole home comfortable for extended periods of time.

It’s essential to achieve a delicate balance between too little and too much moisture in your home. Too little moisture results in static shock, dry skin and structural damage. Too much vapor (high humidity) can lead to your home being under humidified, with resultant problems. A humidifier can prevent static shock, dry skin and household damage. However, too much moisture results in mold and bacterial development. Because mold and bacteria thrive on too much moisture, maintaining proper humidity levels is essential.

Different whole-home models for different home needs

Nothing complements your Aprilaire Automatic Humidifier like an Aprilaire Air Cleaner. Together, they extend your Aprilaire Humidifier’s life and help keep your home as fresh and comfortable as the day you brought it home.

Protect your family and your home with whole-home humidification

Millions of homeowners trust Aprilaire to deliver the best care for indoor dryness. We invented whole-home humidification, led the way by introducing the automatic control and continue to deliver easy and intelligent humidification solutions with a line of humidifiers designed to meet most needs.

The Aprilaire Automatic Humidifier features exclusive technology that eliminates the need for constant manual adjustments to deliver the ideal level of humidity.

- Helps protect against discomfort, illness and damage by eliminating static, dry skin and dry hair, dry wood and damaged walls. A properly humidified home can be up to four times less likely to have cracking windows due to condensation on windows, potentially leading to water damage on the interior and structural damage from mold and bacterial growth.

The air inside your home is drier than you think.

The average North American home can be up to four times below recommended indoor relative humidity levels.

When the home heating season arrives, it can be accompanied by a variety of other problems caused specifically by low relative humidity in your home. The resulting dry air irritates mucous membranes in the nose, sinuses, and throat, and can relieve the discomforts of colds and the flu.

Inflamed respiratory passages in the nose can eliminate the dry air that can irritate and inflame the respiratory passages in the nose and throat, and can relieve the discomforts of colds and the flu.

Dry noses. Scratchy throats. Itchy skin. Results of whole home humidification can be up to four times below recommended indoor relative humidity levels.

It’s essential to achieve a delicate balance between too little and too much moisture in your home. Too little moisture results in static shocks, dry skin and dry damaged furnishings. Too much moisture causes condensation on windows, potentially leading to structural damage.

Humidifiers can help you maintain a comfortable indoor relative humidity level. A professionally installed, whole-home humidifier helps deliver appropriately conditioned air to every room in your home, making it more effective than portable units that humidify just one area at a time. A humidifier can also provide energy savings by making the air you feel warmer at lower temperatures.

But not all whole-home solutions are created equal.

The Aprilaire Automatic Humidifier features exclusive technology that eliminates the need for constant manual adjustments to deliver the perfect amount of moisture —its unique controls manage the humidification process automatically.

- Protects against discomfort, illness and damage by eliminating static electricity, dryness and over the threshold of your home.
- Eliminates the need to make constant manual adjustments with exclusive “no touch” operation.
- Maintains proper humidity levels throughout the home by sensing changes in indoor temperatures and indoor relative humidity automatically.
- Ensures the best performance all the time as an intelligent product that responds when you change the water panel.
- Improves comfort, well-being, preservation and energy savings, generating up to 50% more moisture than humidifiers using a manual control.
